

Alexandre PICHOT

Search for a internship abroad (May to August 2027)

EXPERIENCE

LAMIH (CNRS/UPHF) - Apprentice Engineer

September 2025 - August 2028

- PSCHITT-Pedestrian gait simulator (development in progress)
 - Real-time data acquisition software for force sensors.
 - Motor control software (PLC, Modbus TCP).
 - Design of electrical power panel.
- PSCHITT-Rail tram/train simulator (SOGELAIR/OKTAL environment)
 - Participation to the OkSyGen-Rail integration steps.

STME Fire - Research & Development - Apprenticeship

March 2025 - August 2025

- Studied a more economical PLC for fire self-protection masts (forest protection).
- Studied a adapted system usable for residential use.

STME - Design Office - Apprenticeship

July 2023 - March 2025

- Studied an acquisition & management system for home sensors
- Quotation
- Electric diagrams, equipment sizing and layout

TECHNICAL SKILLS

PROGRAMMING

C, C++, Python, Node-RED, HTML, JavaScript, CSS, SQL, IDE (Visual Studio Code...), Git

CAD

Fusion360, Solidworks, Autocad, DesignSpark PCB

AUTOMATION

PLC (Siemens, Schneider, Crouzet), Microcontroller/Nano-computer (Arduino, STM32, Raspberry), PLD (FPGA Altera), ROS, embedded Linux

ELECTRICAL DIAGRAM

Design & implementation (Schneider, Hager, Legrand)

OFFICE AND TOOLS

Microsoft Office, LaTeX, Docker

LANGUAGES

French: native language

English: advanced (B2)

Spanish: basic working knowledge

INTERESTS

- Sports (running and volleyball)
- Cooking

EDUCATION

Engineering School (Master degree) | INSA Hauts-de-France

Electrical engineering & Industrial Computing

September 2025 - August 2028

industrial computing and connected devices

Bachelor of technology | IUT Nice Côte d'Azur (France)

Electrical Engineering & Industrial Computing

2025

Electronics and Embedded Systems

UNIVERSITY PROJECTS

- **Line-following robot:** creation and soldering of PCB boards, embedded programming in C (PID control).
- **Commucating bicycle:** IoT device configuration (Lorawan), antenna manufacturing (Advanced Design System), sensor integration, dashboard (Node-RED), database storage (InfluxDB).
- **AI road sign recognition:** neural network machine learning (python), embedded programming (ESP32, C).
- **Drone:** basic aerodynamic study, development of PID control algorithms, programming of autonomous missions (waypoints).

PERSONAL PROJECTS

- **Cachan autonomous robot competition (2nd place in 2023 & 2024):** mechanical design and 3D printing (Fusion 360), control board and interface board design and implementation (DesignSpark), microcontroller development C.
- **Home automation & NAS:** installed and set up Home Assistant and a NAS on a Raspberry Pi 5 using Linux, Docker, multi-protocol sensors and output.
